

**Fact 1**  
Made from 100% recyclable 'Eco Friendly' Polypropylene plastic

**Fact 3**  
Compatible with Jaeger, MediSoft, Sensormedics, MedGraphics, nSpire, EasyOne, Vitalograph, Thorasys, CosMed and all portable spirometers

**Fact 5**  
Now child friendly with NEW Paediatric mouthpieces available for the entire range

**Fact 7**  
Clinically the most effective filter on the Australian/New Zealand market with a Bacterial/Viral filtration efficiency of 99.99% at a flow rate of 720L per min\*

**Fact 2**  
Employs a 200g Tech Electrostatic HyperGard® filter media, unlike clinically inferior filters which employ a less expensive and less effective media

**Fact 4**  
Heat Clamped and not Ultrasonically Welded - maintaining filtration integrity by preventing fray damage to filter media

**Fact 6**  
The ONLY filter that is legally protected by a registered Design Patent for its ergonomic elliptical mouthpiece

\*Please contact Bird Healthcare for copies of full published journal articles, trials, research reports and registration documentation.

**WARNING: Beware of cheap, inferior and copy imports.**

It is your right to request from your filter supplier a full independent HPA (Health Protection Authority UK) Bacterial/Viral filtration report. All Bacterial/Viral testing must be conducted at 700-750L/per minute. Testing conducted at lower rates is not representative to flow rates in spirometry tests. Products tested at lower rates of filtration should be approached with caution. It is essential that all Lung Function laboratories ensure they are using a product suitable for Lung Function environment that is of the highest infection control standard available on the market\*.
