

Safil®

Braided and coated synthetic mid-term absorbable suture made of 100% polyglycolic acid (PGA)

Advantages:

- Optimized braiding structure enhances tensile strength
- Smooth surface enhances passage through tissue
- Softness and pliability provide excellent handling characteristics

Tensile Strength:

50% tensile strength at 18 days
0% tensile strength at 28-35 days

Absorption:

Mass Absorption in 60-90 days

Surgical Indications:

Safil is indicated for all types of soft tissue approximation and ligation where surgical practice requires the use of a synthetic, absorbable, braided suture material.

Common Applications:

- Gynecology and obstetrics
- Orthopaedics
- Urology
- General surgery
- Skin closure
- Abdominal wall closure
