## VACCINE REFRIGERATORS

The AQ Medical refrigerator range are compact, robust and cost effective units, purpose-built for vaccine storage following the Australian Government Department of Health's 'Strive for 5' vaccine storage guidelines.

They are designed with low noise output and consistent temperature readings in mind, and maintain a stable temperature between the recommended +2°C to +8°C. AQ Medical units hold safety features such as visual and audible alarms in the event that temperatures fluctuate outside the set range.

All AQ Medical refrigerators are accredited by the Quality Care Pharmacy Program (QCPP), a quality assurance program that was developed by the Pharmacy Guild of Australia in consultation with the Pharmaceutical Society of Australia.

AQ Medical units are also backed by the extensive Avem Quirks service network. With qualified technicians and warehousing facilities across Australia, we can deliver responsive service and exceptional support on a national level.

AQ Medical vaccine refrigerators offers prime performance and quality at a highly competitive price.
