

QUALITY CONTROL

If you work in a laboratory you should perform quality control testing and you should read this section.

A procedural control is included in the test. A colour line appearing in the control region (C) is considered an internal procedural control. It confirms sufficient specimen volume, adequate membrane wicking and correct procedural technique.

Control standards are not supplied with this kit. However, it is recommended that positive and negative controls be tested as good laboratory practice to confirm the test procedure and to verify proper test performance. Quality control testing should be done with each new lot and each new shipment. It should be done every thirty days to check storage. Please contact our Technical Support at 1-507-526-3951 for controls that work with the test cup.

PERFORMANCE CHARACTERISTICS

Eighty clinical urine specimens were analyzed by GC/MS and by the **DrugCheck® NxStep Onsite Drug Test**. Each test was read by three viewers. Samples were divided by concentration into five categories: drug-free, less than half the cutoff, near cutoff negative, near cutoff positive, and high positive. Results were as follows:

Accuracy – 6-Acetylmorphine (6-ACM)

	Positive	Negative
Negative Samples	0	20
Near Cut-off Negative Samples [between 50% of cut-off and cut-off]	0	20
Near Cut-off Positive Samples [between cut-off and 150% of cut-off]	19	1
Positive Samples [>150% of cut-off]	20	0
Agreement with GC/MS	98%	>99%

Overall Agreement with GC/MS is 99%.

Accuracy – Amphetamine 1000

Viewer A:

Result	Drug-free	Less than half the cutoff Concentration by GC/MS analysis	Near cutoff negative (Between 50% below the cutoff and the cutoff concentration)	Near cutoff positive (Between the cutoff and 50% above the cutoff concentration)	High positive (Greater than 50% above the cutoff concentration)

Precision – Methlyphenidate

Test precision was determined by blind tests with control solutions. Controls with Methlyphenidate concentrations at 50% of the cut-off yielded negative results, and controls with Methlyphenidate concentrations at 150% of the cut-off yielded positive results.

SPECIFICITY AND CROSS REACTIVITY

To test the specificity of the test, the test device was used to test 6-Acetylmorphine, Amphetamine 1000, Amphetamine 500, Amphetamine 300, Barbiturates, Benzodiazepine 300, Benzodiazepine 200, Buprenorphine 10, Buprenorphine 5, Clonazepam, Cocaine 300, Cocaine 150, Cotinine, 2-Ethylidene-1,5-Dimethyl-3,3-Diphenylpyrrolidine 300, 2-Ethylidene-1,5-Dimethyl-3,3-Diphenylpyrrolidine 100, Ethyl Glucuronide, Fentanyl, Ketamine, Marijuana 50, Marijuana 20, Methadone, Methamphetamine 1000, Methamphetamine 500, Methamphetamine 300, Methylenedioxyamphetamine, Methylphenidate, Opiates 2000, Opiates 300, Oxycodone, Phencyclidine, Pregabalin, Propoxyphene, Synthetic Cannabinoid (K2), Synthetic Cannabinoid (K3), Synthetic Cannabinoid (K4), Tramadol, and Tricyclic Anti-depressants drug metabolites and other components of the same class that are likely to be present in urine. All the components were added to drug-free normal human urine. The following structurally related compounds produced positive results with the test when tested at levels equal to or greater than the concentrations listed below.

6-Acetylmorphine (6-ACM)	Result
(6-Acetylmorphine, Cutoff = 10 ng/mL)	Positive at 10 ng/mL

EFFECT OF URINARY SPECIFIC GRAVITY

Urine samples of normal, high, and low specific gravity ranges (1.000 - 1.035) were spiked with drugs at 25% below and 25% above cut-off levels respectively. The **DrugCheck® NxStep OnSite Drug Test** was tested using twelve drug-free urine and spiked urine samples. The results demonstrate that varying ranges of urinary specific gravity do not affect the test results.

EFFECT OF URINARY PH

The pH of an aliquot of negative urine pool was adjusted to pH ranges of 4.0-9.0 and spiked with drugs at 25% below and 25% above cut-off levels. The spiked, pH-adjusted urine was tested with the **DrugCheck® NxStep OnSite Drug Test**. The results demonstrate that varying ranges of pH do not interfere with the performance of the test.
