CoFlex® TLC

Two Layer Compression

Non-Medicated

- New itch control first layer. CoFlex® TLC has added a new formula to Layer 1 that now includes aloe to make it more itch-resistant and comfortable on sensitive skin.
- CoFlex® TLC uses an odour control foam 1st layer that absorbs 85% of the odours of standard foam.
- CoFlex® TLC outperforms other 2 layer compression kits from the superior quality of its patented Latex Free cohesive bandage formula and consistent non-constricting compression.

Medicated

- Layer 1 is a Zinc or Calamine impregnated foam roll that rolls on cleanly and easily as a dry foam roll.
- Layer 2 is the only Latex Free compression bandage to stick directly on a moist dressing allowing the use of a low-profile medicated compression.
- Visual indicators have been incorporated into the cohesive bandage to assist with application in all medicated and non - medicated kits.
- Calamine and Zinc Impregnated Foam rolls are available separately.

• For ABI > 0.5
